DETAILED ACTION

Response to BPAI Decision

In the decision by the Board of Patent Appeals and Interferences (BPAI) mailed 8/20/04 in paper number 13, the rejections of claims 1-46 were reversed. The following action is a response to the decision rendered by the Board of Patent Appeals and Interferences (BPAI) mailed 8/31/04. Claims 1-46 are pending in the application and are allowed.

Allowable Subject Matter

Claims 1-46 are allowed. The following is an examiner's statement of reasons for allowance:

Claim 1 :

The Board of Patent Appeals and Interferences has interpreted the Appellant's arguments and the claim language of claim 1 as invoking 35 U.S.C. 112, 6th paragraph, thereby limiting the "means-plus-function" language/limitations to the corresponding structure(s) described in appellants' specification and equivalents thereof. See *In re Donaldson*, 16 F.3d 1189, 1193, 29 USPQ2d 1845, 1848 (Fed. Cir. 1994) (pages 9-11, BPAI decision 8/20/04).

The closest prior art of record (Evans and Moshfeghi) does not teach or fairly suggest a patient-controlled electronic medical record system including a medical information server connected to a network and medical information database having software to communicate with the medical information server. More specifically, the prior art does not specifically teach or suggest "a patient-controlled electronic medical system having means for patients to allow medical provider computer computers to access patient-selected portions of the patient's medical record for viewing and adding to the patient's medical record ..." (see: page 11, BPAI decision).

Art Unit: 3626

Because the prior art does not teach or disclose the above features in the specific manner and combinations recited in claim 1, and as further interpreted by the Board of Patent Appeals and Interferences, claim 1 is hereby deemed to be allowable.

Originally numbered claims 2-18, 37, 39, 43 and 45 are dependent on originally numbered claim 1, and therefore incorporate the allowable features of originally numbered claim 1 through dependency.

Claim 19 :

The Board of Patent Appeals and Interferences has interpreted the Appellant's arguments and the claim language of claim 1 as invoking 35 U.S.C. 112, 6th paragraph, thereby limiting the "means-plus-function" language/limitations to the corresponding structure(s) described in appellants' specification and equivalents thereof. See *In re Donaldson*, 16 F.3d 1189, 1193, 29 USPQ2d 1845, 1848 (Fed. Cir. 1994) (pages⁹⁻ 11, BPAI decision 8/20/04).

The closest prior art of record (Evans and Moshfeghi) does not teach or fairly suggest a "method for patient control of an electronic medical record having the step of providing patients with means to allow medical provider computers to access patient-selected portions of the patient's medical record for viewing and adding the patient's medical record" (see: page 11, BPAI decision).

Because the prior art does not teach or disclose the above features in the specific manner and combinations recited in claim 19, and as further interpreted by the Board of Patent Appeals and Interferences, claim 19 is hereby deemed to be allowable.

Art Unit: 3626

Originally numbered claims 20-36, 38, 40-42, 44 and 46 are dependent on originally numbered claim 19, and therefore incorporate the allowable features of originally numbered claim 19 through dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

In related art (WO 2004/102393) Hofstetter teaches a method for controlling the access of healthcare providers to the medical records of a patient held in a medical record database.

In related art ("Partners With MedTouch Internet Health Service; Health Profiling software helps individuals manage personal health risks") Business Wire teaches the creation of an electronic health risk profiling and management tool to enhance the health consumer Internet experience by helping people store and have access to their personal health records in a safe, secure, confidential environment.

The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure as background material and is not of particular significance. These prior art patents fail to teach or fairly suggest a patient-controlled electronic medical system having means for patients to allow medical provider computer computers to access patient-selected portions of the patient's medical record for viewing and adding to the patient's medical record.
